<sup>1</sup> Resource located within either 5 or 10 miles of nearest turbine, as indicated

<sup>2</sup> If no viewpoint (VP) number is indicated, no photo was obtained within ¼ mile during fieldwork

<sup>3</sup> For large areas and linear sites, approximate distance to the nearest turbine was measured from the respective areas closest to the turbine

<sup>4</sup> Project visibility is indicated as follows: V=Visible, PV=Partly Visible, NV=Not Visible, U=Undetermined. A "-" is indicated when previous analysis eliminated potential visibility

<sup>5</sup> Does not take into account screening provided by structures and street trees

<sup>6</sup> When cross section visibility is indicated as "NV" and simulation visibility as "V", that is because cross section is determined from a single point, whereas simulation visibility may be from a different location within the resources and accounts for field of view.
